

# Android version history

From Wikipedia, the free encyclopedia

The version history of the Android operating system began with the release of the Android beta in November 2007. The first commercial version, Android 1.0, was released in September 2008. Android is a mobile operating system developed by Google and the Open Handset Alliance, and has seen a number of updates to its base operating system since its original release. These updates typically fix bugs and add new features. Since April 2009, Android versions have been developed under a codename and released in alphabetical order: Cupcake, Donut, Éclair, Froyo, Gingerbread, Honeycomb, Ice Cream Sandwich, and Jelly Bean. The most recent major update was Jelly Bean v4.1, which was announced in June 2012, and released into the Android Open Source Project a month later.

## Android 4.1.x Jelly Bean

Google announced Android 4.1 (Jelly Bean) at the Google I/O conference on June 27, 2012. Based on Linux kernel 3.0.31, Jelly Bean was an incremental update with the primary aim of improving the functionality and performance of the user interface. The performance improvement involved "Project Butter", which uses touch anticipation, triple buffering, extended vsync timing and a fixed frame rate of 60 fps to create a fluid and "buttery"-smooth UI.<sup>[68]</sup> Android 4.1 Jelly Bean was released to AOSP on July 9, 2012,<sup>[69]</sup> and the Nexus 7, the first device to run Jelly Bean, was released on July 13, 2012.<sup>[70]</sup>
